

TUBERÍAS Y PREFABRICADOS

PALAU

S.A.

With the aim of giving better service to its customers everyday, Tuberías y Pref. Palau SA began more than 30 years ago producing fresh concrete, offering the highest quality product.

We have a wide range of concrete according to the different needs of our customers.

- **Strength in N/mm²:** 20, 25, 30 and 35 (for other strengths, consult the technical department).
- **Consistency:** dry, plastic, soft, smooth and liquid.
- **Measurement of aggregate:** 12 and 20 mm.
- **Environments:** under current regulations EHE-08.

Based on the above parameters, the concrete shall be classified according to the following formats:
T - R / C / TM / A

- **T:** HM in the case of mass concrete. HA in the case of reinforced concrete.
- **R:** characteristic strength of concrete expressed in N/mm².
- **C:** types of consistency: D, dry; P, plastic; S, soft; F, fluid, and L, liquid.
- **TM:** maximum aggregate thickness in millimetres.
- **A:** description of the environment the concrete will be exposed to, defined by the combination of a general class of exposure and one or more specific classes, as specified in the regulations.

In addition to the wide range of fresh concrete, we can also supply concrete for shotcrete, prepared mortars and self-levelling concretes.

All our concretes are made of the finest materials, all having quality seals, with the latest additives, subjected to constant quality control by our internal laboratory, ensuring quality and compliance, and reinforced by independent laboratories.

We have highly qualified and continuously trained personnel to offer the best customer service and immediate advice to any questions that may arise before, during and after delivery of the concrete. We are always focused on improving everyday to ensure the ultimate satisfaction of our customers.
